

Cover 2 and Tampa 2

Two deep, five under: the zone that keeps everything in front of it, the cornerbacks who refuse to run, the middle linebacker who does, and the holes every offense knows by heart.

Third-and-12 near midfield, a minute left in the first half. Both cornerbacks stand five yards off the wide receivers, a step outside them, flat-footed. Both safeties are deep, one on each side of the field. The quarterback throws a quick out to the sideline; the corner closes, tackles, gain of eight, and the offense punts. The analyst sounds almost pleased: “That’s Cover 2 doing its job. Keep everything in front, make the tackle.” Two series later the same corner stands in the same spot, the receiver runs straight past him, and the ball drops into his hands 22 yards downfield, between the corner and the safety, before the safety can get there. “And *that’s* the hole in Cover 2,” says the analyst. So which is it? Why would a defense build a coverage around a hole it knows is there, and why did one version of that coverage, Tampa 2, become the identity of a generation of NFL defenses and two Super Bowl champions? This chapter takes Cover 2 apart: who stands where, why, what it buys, where it bleeds, and what became of it.

You’ll be able to...

- Draw Cover 2 against a 2x2 formation, name all seven zones and who takes each, and explain why a Cover 2 cornerback stands where he does.
- Spot a **hard (squat) corner** before the snap and say what it suggests about the coverage.
- Point to Cover 2’s four thin spots (the hole shot, the smash corner, the deep middle and the sideline hole) and name a route that attacks each.
- Explain what makes **Tampa 2** different (the middle linebacker runs the deep middle), the problem it solved, and the kind of player it needs.
- Tell Cover 2 from **2-Man** in the first second after the snap, and say when NFL defenses call each.
- Explain why classic Tampa 2 faded from the NFL, and which of its ideas are still on the field every Sunday.

i You'll need

This chapter builds on the first three coverage chapters. One line each:

- **Shells, man and zone** (A First Look at Defense): the shell is the safeties' picture before the snap: one-high or two-high. Man coverage gives each defender a receiver; zone coverage gives each an area. The nickel defense swaps a linebacker for a fifth defensive back.
- **Zones and techniques** (Coverage Fundamentals): the deep field splits into thirds, halves or quarters. Underneath, from the sideline in: the flat (near the sideline, 0–6 yards deep), the curl (10–12 yards, between the numbers and the hash), the hook (inside the curl, over the tackles) and the hole (the middle, 8–15 yards). A defender drops to a landmark. Press is lining up on a receiver's nose; off coverage is lining up several yards away; a bail is showing press and running deep at the snap. MOFO means nobody in the deep middle before the snap; spot-drop zone defenders drop to landmarks and read the quarterback, while pattern-matching defenders pick up receivers by rule.
- **Man techniques** (Man Coverage): a defender in trail technique runs a step behind and underneath his man, trusting help over the top; Cover 1 is man with one deep safety; a bracket puts two defenders on one receiver.
- **Cover 3** (The Cover 3 Family), this chapter's prerequisite: Cover 3 is three deep, four under. Its corners bail to deep thirds; the curl-flat defender covers both the curl and the flat on one side; in a cloud rotation a corner takes the flat instead, which is the Cover 2 corner's job borrowed for one side.
- **Routes and concepts** (Passing Fundamentals, Dropback Concepts): a seam runs straight up between the hash and the numbers; a hitch stops and turns back; a corner route breaks deep toward the sideline; smash pairs a hitch outside with a corner route inside; four verticals sends four receivers deep. A high-low read puts one defender between a deep route and a short one. A defender's leverage is which side of the receiver he stands on.
- **Field landmarks** (The Game in Fifteen Minutes): the NFL hash marks are only about 3 yards either side of the middle of the field; the painted numbers are about 13 to 15 yards from the middle; each sideline is about 26.7 yards from it.

Reading the diagrams: offense is blue circles (X, Y, Z, H receivers; Q quarterback; R running back). Defense is outlined squares: E and T are defensive ends and tackles, M the Mike (middle linebacker), W the Will, \$ the nickel back, CB a cornerback, FS and SS the free and strong safety. The faint lines across the field are 5 yards apart, starting at the line of scrimmage (the darker blue line), and the small numbers on the left edge give the depth. The orange line is the line to gain. Dashed arrows are defenders' movements, solid arrows receivers' routes, dotted lines man-coverage assignments, shaded ovals zones.

Two deep, five under

Every coverage is an answer to the same arithmetic. The defense has eleven players. If four of them rush the passer, seven are left to cover. Those seven can be split between **deep** defenders, who stop the ball being thrown over everyone's head, and **underneath** defenders, who stop the short and medium throws. Cover 3 splits them three deep and four under. **Cover 2** splits them two deep and five under: two safeties each take a **deep half** of the field, and five defenders spread across the short zones in front of them.

Figure 1: Cover 2 against a 2x2 formation (11 personnel, a nickel defense). Before the snap: two safeties 13 yards deep, between the hash and the numbers; both corners 5 or 6 yards off, a step outside the wide receivers. At the snap (dashed arrows) the four linemen rush and seven defenders drop to their landmarks: the safeties to the two deep halves, the corners to the flats, the Will (W) and the nickel (\$) to the curl-hook zones on each side, and the Mike (M) to the hole in the middle. Five zones underneath, two deep: that is the whole coverage.

Here is each job, and the reason behind it.

- **The two safeties: a deep half each.** Each safety owns everything deep on his side of the field, from the middle of the field to the sideline: about 27 yards of width. His rule, in its simplest form, is *nothing gets behind me*: he stays deeper than the deepest receiver in his half and breaks on the ball when it's thrown. He lines up 12 to 14 yards deep and between the hash and the numbers, roughly 8 to 10 yards from the middle of the field, because from there he can reach both ends of his half: the seam near the middle and the sideline. Being wider and deeper than a quarters safety (Quarters and the Two-High Match Family) is the price of owning a half instead of a quarter.
- **The two corners: the flats.** A Cover 2 cornerback is not a deep defender at all. He lines up close, outside the wide receiver, and at the snap he jams or redirects him and then stays short, in the flat. This is the **hard corner**, and the next section is about him.
- **The Will and the nickel: the curl-hook zones.** Between the flat and the middle, each takes the curl and hook area on his side, 10 to 12 yards deep, under the inside receiver's routes and in the lane of the outside receiver's curls and digs. In a base 4-3 defense these are the two outside linebackers, the Sam and the Will.
- **The Mike: the hole.** The middle linebacker drops straight back to the middle of the field, 10 to 12 yards deep, to take away throws over the ball: digs, crossing routes, a tight end sitting down in the middle. (Hold on to this job. Tampa 2 changes it.)
- **The four rushers.** In a pure Cover 2 nobody else is spare. The coverage depends on four linemen getting to the quarterback without help, because seven defenders are all spoken for.

! Why it exists

What Cover 2 buys. Five underneath defenders is the most any common zone puts there, so every short throw has a defender within a few yards of it, and the quarterback has to fit the ball into small windows or settle for short gains. The corners in the flats take away the quick throws to the outside that beat off-coverage corners (quick outs, hitches, bubble screens), and they squeeze the outside receivers' releases, which disrupts the timing of everything else. Two deep safeties mean no single deep defender is ever alone against two vertical routes in the middle of the field, as Cover 3's lone safety can be. And the corners never have to run step for step with the fastest receivers on the field, which lets a defense survive with corners who are physical and smart rather than fast.

What it gives up. Only two defenders guard the whole deep field, so each safety has a huge area, and wherever two receivers go deep in one half, one safety is in a two-on-one. The corners stay short, so the sideline behind them is empty until a safety gets there. With both safeties deep, only six or seven defenders are near the line of scrimmage against the run (the box), one fewer than when a safety comes down. Cover 2 is a bet that the offense can't complete enough of the hard throws to make up for all the easy ones it takes away.

Cover 2 also has a run-defense job built into it, and it explains the corners' alignment as much as the passing game does. Against a run to his side, the Cover 2 corner is the force player: he comes up hard from the outside, meets the ball carrier at the edge and turns him back inside, toward the linebackers. The safety on that side becomes the alley player, filling the gap between the corner and the box. A corner standing five yards off, outside the receiver, with his eyes inside, is in exactly the right spot to force, which is one more reason he stands there. (Run Fits and Box Math builds the run fits.)

i Madden vs. real life

On a video-game play-call screen, Cover 2 looks like one play: pick it and the same seven zones appear every time. On an NFL defense, "Cover 2" is a family with dozens of members. Some teams press the corners and some play them off; some spot-drop and some pattern-match; some play it with three linebackers and some with a nickel or dime; one coach's safeties line up on the hashes and another's on the numbers. And many staffs never call it "Cover 2" at all. What stays the same is the skeleton, two deep halves and five underneath, with the corners in the flats. That is what to look for.

The hard corner

The single most distinctive player in Cover 2 is the cornerback who doesn't go deep. A **hard corner** (also called a **squat corner**) lines up 5 to 7 yards off the outside receiver, or right on him in press, a step outside him with his shoulders turned slightly in so he can see through the receiver to the quarterback. At the snap he does three things in order:

1. **Collision and redirect.** He meets the receiver at the line or as he comes off it, gets his hands on him, and makes him release *inside*. A receiver who wants to run straight up the sideline gets pushed toward the middle of the field, where the safety is. Every step the receiver loses getting past the corner is a step the safety gains. All of this has to happen within five yards of the line of scrimmage: after that, contact before the ball is thrown is a foul.
2. **Sink.** If nobody threatens the flat, he doesn't stand still. He gives ground, backing up and widening at an angle under the outside receiver, to shrink the gap between himself and the safety. Coaches teach it as a rule, *sink until something threatens the flat*.
3. **Squat.** When a receiver (the slot, the tight end or a running back) breaks toward the flat, or the quarterback's eyes go there, he stops, plants and comes forward to make the tackle. He keeps outside leverage throughout, so anything that goes inside of him goes to the linebackers and the safety, and nothing escapes to the sideline.

Set that next to the Cover 3 corner from the previous chapter, against the same receiver.

Cover 3 corner: bail

Cover 2 corner: hard (squat)

Figure 2: Two corners, one receiver (the offense's right side only). Left, Cover 3: the corner lines up 7 or 8 yards off and bails at the snap, turning to run with Z into his deep third; the flat is the curl-flat defender's (\$). Right, Cover 2: the corner lines up 5 yards off, a step outside Z, jams him, forces his release inside toward the safety, then sinks under him and sits in the flat. Behind him, the strong safety (SS) has the whole deep half. Same receiver, opposite jobs: one corner is a deep defender who also helps in the flat, the other a flat defender who also slows down the deep ball.

Why build a corner this way? Three reasons, and each is about time.

The flats are where quick throws go. A corner 8 yards off and backing up concedes the 5-yard out and the hitch: by the time he plants and drives on the throw, the receiver has caught it and turned upfield. A squat corner is already there. Against offenses that live on quick timing throws to the outside (The Quick Game), that matters on every down.

The jam buys the safety time. The weakness of Cover 2 is the ground the safeties have to cover, so anything that delays the outside receiver helps. A receiver who has been knocked off his line and forced inside arrives at 15 yards a half-second late and closer to the middle, which is exactly where the safety is coming from.

Outside leverage turns the sideline into a defender. Because the corner refuses to let anything escape outside, every receiver on his side is funnelled toward the middle of the field, into the zones of the linebackers and the safety. The offense has to throw *into* the defense.

The price is plain from the picture: once the receiver is past him, the corner is no longer a deep defender. Everything behind him and outside the safety is grass, and it stays grass until the safety covers the 10 or 15 yards to get there.

¹"1978 NFL season," Wikipedia: https://en.wikipedia.org/wiki/1978_NFL_season (defenders allowed to contact receivers only within 5 yards of the line of scrimmage; previously contact was allowed anywhere until the ball was thrown); "Mel Blount explains play that created Mel Blount rule," Steelers Depot (Feb. 2024): <https://steelersdepot.com/2024/02/mel-blount-explains-play-that-created-mel-blount-rule> . Blount's height and the rule's nickname: https://en.wikipedia.org/wiki/Mel_Blount

i Go deeper: when the rules changed the corner's job

Before 1978, defenders could keep hitting a receiver anywhere on the field until the ball was in the air. Pittsburgh's Mel Blount, a 6-foot-3 cornerback on the Steelers defenses of the 1970s, was so good at manhandling receivers all the way down the field that the 1978 change is still called the "Mel Blount rule": from that season, defenders could make contact with a receiver only within 5 yards of the line of scrimmage.¹ The Cover 2 corner's jam survived because it happens inside those 5 yards. What disappeared was a defense's ability to keep rerouting receivers with linebackers and safeties downfield. The full story of the chuck rule and its effect on passing is in 1978 and the Passing Revolution, and today's contact rules are in Contact Rules and Penalties as Strategy.

Where Cover 2 is thin

Every coverage has holes, because seven defenders can't cover a field 53 yards wide and as deep as a quarterback can throw. Cover 2's are unusually well known, because the coverage is so old and so common that every offense carries a list of its "Cover 2 beaters." There are four places to look.

Figure 3: The Cover 2 map: the seven defenders at their landmarks about a second and a half after the snap, and the four thin spots (green). (1) The hole shot: deep along the sideline, behind the corner and in front of the safety. (2) The smash corner: the same strip of grass reached from inside, by a corner route breaking over the squatting corner. (3) The deep middle, between the two safeties and behind the Mike. (4) The sideline hole: the intermediate band outside the curl-hook defender, above the corner and below the safety, where deep outs and comebacks land. Each thin spot exists on both sides of the field; each is marked once here.

① **The hole shot.** The most famous one. The corner is sitting in the flat, 6 to 10 yards deep. The safety is on his half, starting 13 yards deep and 8 to 10 yards from the middle. Between them, along the sideline from about 15 to 25 yards deep, is a strip of grass that nobody is standing on at the snap. A **hole shot** is a ball thrown into that strip: usually the outside receiver's go or fade route, released past the squatting corner and thrown on time, toward the sideline, before the safety can get across. The arithmetic is a race. From his alignment, the safety is roughly 14 yards from the spot where a fade is caught 20 or 22 yards downfield, 5 yards from the sideline. Reading the play for a few tenths of a second and then running at 6 yards a second, he needs close to 3 seconds; a well-timed fade is caught at about the same moment. If anything holds him for a beat (a second receiver running up the seam inside him, or the quarterback's eyes looking that way), he loses. That is why offenses pair the outside go route with a seam inside it: two vertical routes in one half put one safety in a two-on-one. Four verticals does it on both sides at once.

② **The smash corner.** Smash reaches the same grass from the inside. The outside receiver runs a hitch at 5 or 6 yards, which holds the hard corner in the flat: his rules tell him to sit on it. The inside receiver runs 10 or 12 yards up the field and breaks toward the back corner of the field, over the corner's head and under the safety. The corner can't play both: if he sinks under the corner route, the hitch is open; if he squats on the hitch, the corner route is. It is a high-low read of one defender, and the next section plays it out frame by frame.

③ **The deep middle.** With two safeties each guarding a half, the seam where the halves meet is the farthest point from both of them. Nobody is standing in the middle of the field 18 to 25 yards deep, and the Mike, who has the hole at 10 to 12 yards, can't run with a receiver who goes past him. A seam route that splits the safeties, a post, or a tight end running straight up the middle puts both safeties in a bind: whichever one comes inside to help has left his own sideline. This is the hole Tampa 2 was built to close.

④ **The sideline hole.** Underneath the safety and above the corner there is also an *intermediate* gap, about 12 to 18 yards deep, outside the curl-hook defender. A deep out or a comeback from the outside receiver lands there; so does the middle route of a flood concept, which sends one receiver deep to hold the safety and one to the flat to hold the corner, then throws to the one in between. Coaches name these spots differently; some call the whole strip from 12 to 25 yards "the Cover 2 hole" and some reserve the term for the deep end. The geometry is the same either way: the corner is low, the safety is high and wide, and the sideline between them is the offense's.

🔥 Common misconception

"Cover 2 is soft." It's an easy thing to believe when a defense gives up 8-yard completions on third-and-12 and the announcer says the defense is "playing soft." But Cover 2's corners are the *most* aggressive in football against short throws, and five underneath defenders make the short middle crowded. What Cover 2 gives up is not the short ball but specific intermediate and deep windows, and a defense that plays it well makes the offense find those windows with a well-timed, accurate throw, over and over. A third-and-12 completion for 8 is the coverage working.

What the data say: quarterbacks throw deep middle against Cover 2

If the deep middle really is the weak spot, quarterbacks should aim there more often against Cover 2 than against other coverages. They do. The charting data in nflverse label the coverage on most dropbacks since 2018, and the play-by-play records whether each pass went to the left, middle or right of the field.

Figure 4: Where deep passes go against each coverage. Left: of all passes thrown 15 or more yards past the line of scrimmage, the share the play-by-play records as thrown to the middle of the field (rather than left or right). Right: expected points added (EPA) per deep pass to the middle. Against Cover 1 and Cover 3 a deep safety sits in the middle, and quarterbacks rarely throw there; against Cover 2 they throw there more often than against any other coverage, and those throws are among the most valuable (only quarters, the other two-high family, comes close). Regular-season dropbacks with a charted coverage; the two charting sources are shown separately because they label coverages differently.

The pattern is the coverage's geometry showing through the numbers. Against Cover 1, with a free safety parked in the middle, only about one deep pass in nine goes there. Against Cover 3 it is about one in five. Against Cover 2 it is about one in three in the Next Gen Stats seasons and a little under that in the FTN seasons, as high as against any coverage, and a deep pass to the middle against Cover 2 has been worth about two-thirds to three-quarters of a point to the offense on average, more than the same throw against Cover 3.² Quarters, the other two-high family, sits in between on how often the middle is targeted, because its safeties play narrower and help in the middle (that's the next chapter), though a deep middle completion against it is just as costly.

Two cautions. The play-by-play's "middle" is a scorer's judgement, not a measured zone, so read the shares as rough. And these are *results*, which mix the coverage's weakness with the offense's choices: offenses that expect Cover 2 call plays that attack the middle. That is the point, though. The middle is where offenses go when they see two deep safeties, which is why defenses started looking for someone to put there.

Smash against Cover 2, move by move

Dropback Concepts drew smash from the quarterback's side, as a read. Here it is from the defense's side, as a problem with a clock on it. Watch the right cornerback.

²This book's calculation from nflverse play-by-play joined to `load_participation()` coverage labels: regular-season dropbacks 2018–2025 with a charted coverage (BLOWN, COMBO and PREVENT excluded), pass attempts with `air_yards` of 15 or more and a recorded `pass_location`. Share thrown to the middle, NGS seasons (2018–2022) / FTN seasons (2023–2025): Cover 1 10.9% / 11.2%; Cover 3 20.2% / 21.8%; quarters 27.8% / 28.0%; Cover 2 36.3% / 29.4% (n = 2,121 and 1,739 deep passes against Cover 2). EPA per deep pass to the middle against Cover 2: +0.65 / +0.75; against Cover 3: +0.61 / +0.55. Coverage labels come from two charting sources with different rules (NGS through 2022, FTN from 2023); none exist for 2016–2017. Reproduce with the code behind the figure.

Figure 5: Smash against Cover 2, the offense's right side, simulated. Snap: the corner (ringed) is 5 or 6 yards off Z, a step outside him; the strong safety (SS) is 13 deep. +0.9 s: Z has pushed to 6 yards and is turning back for the hitch; the corner, doing his job, has jammed and is sitting in the flat. Y, the slot receiver, is running straight up the field past the nickel (\$). +1.9 s: Y has broken toward the sideline at 8 or 9 yards and the quarterback throws. The corner is driving on the hitch; the safety has backed up to 19 yards, on top of Y but 8 yards inside the spot Y is heading for, and is only now reacting. +3.5 s: the ball arrives about 18 yards downfield and 6 or 7 yards from the sideline, over the corner and under the safety, who is still a couple of steps away. The left side runs the mirror image (not shown).

Look at the corner's three panels and you see a player doing everything right and losing anyway. His rules say: jam the outside receiver, sink, and squat on anything short in the flat. The hitch is short and in the flat, so he squats on it. Meanwhile, the corner route breaks behind him into the strip of grass he just left. The safety's rules say: stay deeper than anything in your half. He does: at 1.9 seconds he is 19 yards deep, deeper than Y, but 8 yards inside the spot the corner route is heading for, and he can't start running at it until he's sure that's where the ball is going. By the time he is sure, the ball is in the air. The throw beats him by a step.

That is the general shape of beating any zone: find one defender with two jobs and make him choose. In smash the cornerback is that defender. And the quarterback's read is mercifully simple: he watches only the corner. Corner sinks, throw the hitch. Corner squats, throw the corner route.

How does the defense fight back? Not by playing Cover 2 harder, but by changing what the corner and safety do when they see this route combination.

- **Teach the corner to sink further.** Many Cover 2 coaches tell the corner that when the outside receiver runs a short route and the inside receiver goes vertical, he should keep sinking under the vertical instead of jumping the hitch: give up the 6-yard hitch, which the curl-hook defender can rally to, and take away the 18-yard corner route.
- **Widen the safety.** A safety who aligns wider, or who reads the inside receiver's release and goes straight to the corner route, gets there sooner, at the cost of the seam and the deep middle.
- **Change the coverage to that side.** Against a team that loves smash, a defense can play Cover 2 to one side and quarters to the other (Cover 6), or trap the corner route with a corner who bails and a safety who drives on the hitch (Palms). Both are in Quarters and the Two-High Match Family. Or it can play 2-Man, where the corner ignores the zones and follows his man, and the corner route runs into a trailing slot defender and a safety over the top.

Smash also tells you something about the chess of play-calling. Smash is a great call against Cover 2 and a mediocre one against Cover 3, whose corners drop deep into the corner route's path. Which is why defenses that play a lot of Cover 2 try hard to make it look like something else before the snap (Disguise, Rotation, and Split-Field Coverage), and why What Beats What puts smash versus Cover 2 in the first row of its matrix.

Tampa 2: the Mike takes the middle

Go back to hole ③, the deep middle. Cover 2 has nobody there, and offenses learned to send a receiver straight up it: a tight end, a slot receiver, a running back out of the backfield. The Mike, sitting in the hole at 10 to 12 yards, watches him run past. Each safety is busy with his own half. The ball goes over the Mike and between the safeties.

Tampa 2 answers that with one change. At the snap, if it's a pass, the Mike doesn't stop at 10 yards. He turns and runs straight down the middle of the field, to 15 or 20 yards, getting depth until something stops him, and he carries any receiver who runs up the seam in front of him. Coaches call his landing spot the "pipe" or the "middle of the field": the space between the two deep safeties. Everything else is Cover 2: two safeties on the deep halves, squat corners in the flats, two outside linebackers (or a linebacker and the nickel) in the curl-hook zones.

Why it existed: a defense for fast, smart, ordinary-sized players

The coverage didn't come first. The players and the philosophy did.

Its roots are in Pittsburgh. Bud Carson, the Steelers' defensive backs coach from 1972 and their defensive coordinator from 1973 to 1977, had started building a two-deep zone at Georgia Tech, and in Pittsburgh he refined it into the coverage behind the "Steel Curtain." Its signature was a middle linebacker who dropped into coverage: when the Steelers got Jack Lambert, a rangy, fast middle linebacker, in 1974, Carson could ask him to run deep down the middle. The 1976 Steelers allowed 28 points in total during a nine-game winning streak at the end of the season.³ One of the safeties on the 1977 and 1978 Steelers was an undrafted rookie from Minnesota named Tony Dungy, who stayed in Pittsburgh as an assistant from 1981 to 1988, the last five years as defensive coordinator.⁴ Years later he described his whole approach in one sentence: "My philosophy is really out of the 1975 Pittsburgh Steelers playbook."⁵

When Dungy became the Tampa Bay Buccaneers' head coach in 1996, he brought that playbook and a defensive coordinator, Monte Kiffin, who had been on Dennis Green's Minnesota Vikings staff with him in the early 1990s. Kiffin coordinated Tampa Bay's defense for thirteen seasons, 1996 to 2008, and the two of them turned the old Steelers idea into an identity, so tightly linked to the franchise that the coverage took the city's name.⁶

Their version was built on a few stubborn ideas:

- **Simplicity.** A small number of calls, practised until every player could play them without thinking. Players who aren't thinking play fast.
- **Speed over size.** Lighter, faster players at every level: an undersized, quick 3-technique defensive tackle (Warren Sapp) who penetrated rather than held his ground, linebackers who could run like safeties, and a 4-3 front in which every lineman attacked one gap (Even Fronts).
- **Four rushers, seven in coverage.** No exotic blitzes. The four-man rush was expected to get home on its own, which is why the scheme prized pass-rushing linemen.
- **Everything in front, then tackle.** Spot-drop zones, every underneath defender's eyes on the quarterback, and a sprint to the ball the moment it's thrown. Let the offense complete short passes, tackle immediately, and wait: a 12-play drive has a dozen chances for a penalty, a sack, a dropped pass or a turnover.

The Mike's deep drop fits all four. It needs a fast linebacker rather than an extra safety, it uses no extra rusher, and it removes the one throw that turns a long drive into a short one.

i Madden vs. real life

In a video game you can call Tampa 2 with any eleven players and the Mike will run his drop. On a real field the coverage is only as good as the man running down the middle. Tampa 2 Mikes have to diagnose run or pass in a step, then turn and run 15 to 20 yards with a receiver while reading the quarterback. The players who made it famous were unusual athletes: Chicago's Brian Urlacher, for example, had played a hybrid linebacker-safety position in college at New Mexico.⁷ A Tampa 2 with an ordinary middle linebacker is a Cover 2 with an extra hole.

³"Bud Carson," Wikipedia: https://en.wikipedia.org/wiki/Bud_Carson (Steelers defensive backs coach 1972, defensive coordinator 1973–1977; began developing Cover 2 at Georgia Tech; the 1976 defense "allowed fewer than 10 points per game, including a nine game winning streak where the defense only allowed 28 points in total"). On Carson moving the middle linebacker into coverage and Lambert's role, see "Tampa 2," Wikipedia: https://en.wikipedia.org/wiki/Tampa_2.

⁴"Tony Dungy," Wikipedia: https://en.wikipedia.org/wiki/Tony_Dungy (Steelers safety 1977–1978; Steelers defensive backs coach 1981–1983 and defensive coordinator 1984–1988; Chiefs 1989–1991; Vikings defensive coordinator 1992–1995; Buccaneers head coach 1996–2001; Colts head coach 2002–2008; Hall of Fame 2016).

⁵"Tampa 2," Wikipedia: https://en.wikipedia.org/wiki/Tampa_2 (Dungy: "My philosophy is really out of the 1975 Pittsburgh Steelers playbook"; Carson "introduced the idea of moving the middle linebacker into coverage").

⁶"Monte Kiffin," Wikipedia: https://en.wikipedia.org/wiki/Monte_Kiffin (Buccaneers defensive coordinator 1996–2008; Vikings assistant 1986–1989 and 1991–1994, overlapping Dungy's 1992–1995 tenure there); NBC News, "Monte Kiffin, NFL defensive mastermind and Super Bowl-winning assistant coach, dies at 84" (July 12, 2024): <https://www.nbcnews.com/news/sports/monte-kiffin-tampa-2-defense-rcna161508>

Film room

i Film room: Pittsburgh Steelers 1974–1977 — Bud Carson’s two-deep zone

The Steelers won Super Bowls IX and X (the 1974 and 1975 seasons) with a defense that could play a two-deep zone with squeezing, physical corners and a middle linebacker who dropped into coverage. Jack Lambert, a rookie in 1974, was the prototype of the coverage linebacker; Mel Blount, the cornerback whose physical style later produced the 1978 contact rule, was the prototype of the corner who controlled a receiver’s release. In 1976 the defense was at its peak: during a nine-game winning streak to finish the season it allowed 28 points in total.

What to notice (on NFL Films footage of the era): the corners’ alignment, tight and outside, and how often the middle linebacker turns and runs down the middle of the field on passing plays. The defense is two-deep before the snap and has a third player deep a second later. Twenty years before it had a name, that is Tampa 2.

i Film room: Tampa Bay Buccaneers 2002 — the scheme at its peak

The 2002 Buccaneers were coached by Jon Gruden, who replaced the fired Dungy before the season, but the defense was still Kiffin’s and still Dungy’s design. It led the NFL in fewest points allowed (196, 12.3 a game) and fewest yards allowed, and opponents had a 48.4 passer rating against it. Derrick Brooks, the weak-side linebacker, was the AP Defensive Player of the Year and returned three interceptions for touchdowns in the regular season.⁸ In Super Bowl XXXVII, on January 26, 2003, Tampa Bay beat an Oakland offense led by the league MVP, Rich Gannon, 48–21. Gannon threw five interceptions, a Super Bowl record; three were returned for touchdowns (two by Dwight Smith, one by Brooks), and safety Dexter Jackson, with two interceptions, was the game’s MVP.⁹ (One footnote to the footnote: Gruden had coached Oakland until the year before, and the Raiders had not changed the audible signals he installed, so the Bucs often knew what was coming.)

What to notice: every underneath defender’s head. At the snap they turn to the quarterback, not to a receiver, and the instant he throws, all of them break toward the ball. Watch Brooks: he plays the curl-hook zone on his side and arrives at the ball at the same moment as the receiver. And watch the Mike (Shelton Quarles that year) run down the middle on passing downs, so that the seam throw the Raiders wanted was never there. Four of Tampa Bay’s starters from that defense, Sapp, Brooks, safety John Lynch and cornerback Ronde Barber, are in the Pro Football Hall of Fame.

⁸“2002 Tampa Bay Buccaneers season,” Wikipedia: https://en.wikipedia.org/wiki/2002_Tampa_Bay_Buccaneers_season (196 points allowed, 12.3 per game; first in total defense, points allowed and interceptions; opponents’ passer rating 48.4); “Derrick Brooks,” Wikipedia: https://en.wikipedia.org/wiki/Derrick_Brooks (2002 AP Defensive Player of the Year; three interception-return touchdowns in the regular season and a fourth in Super Bowl XXXVII; Hall of Fame 2014). Hall of Fame inductions of Sapp (2013), Lynch (2021) and Barber (2023): Pro Football Hall of Fame, <https://www.profootballhof.com/>.

⁹“Super Bowl XXXVII,” Wikipedia: https://en.wikipedia.org/wiki/Super_Bowl_XXXVII (January 26, 2003, Qualcomm Stadium, San Diego; Buccaneers 48, Raiders 21; Gannon’s five interceptions a Super Bowl record, three returned for touchdowns, by Dwight Smith (44 and 50 yards) and Derrick Brooks (44); MVP Dexter Jackson, two interceptions; Lynch’s on-field remarks and the unchanged Raiders audibles described from NFL Films footage).

i Film room: Colts and Bears, 2006 season — one family, two head coaches, one Super Bowl

Super Bowl XLI, February 4, 2007, in the rain in Miami, was a Tampa 2 family reunion. Indianapolis was coached by Dungy, who had built the same defense there after Tampa Bay; Chicago by Lovie Smith, Dungy's linebackers coach in Tampa from 1996 to 2000. They were the first two Black head coaches to reach a Super Bowl, and Dungy became the first to win one, 29–17.¹⁰

The two defenses show how far one scheme can stretch. Chicago's, built around Brian Urlacher in the middle, was one of the best in the league: the Bears went 13–3, and the year before Urlacher had been the Defensive Player of the Year and the defense had allowed the fewest points in the NFL.¹¹ Indianapolis's was small and fast and, in the regular season, the worst run defense in the league, allowing 173 rushing yards a game: the light-box cost of a two-deep, four-rush defense, paid in full. Then the injured strong safety Bob Sanders came back for the playoffs, and the same defense got stingy. In the Super Bowl Sanders forced a fumble and intercepted a pass, and cornerback Kelvin Hayden returned an interception 56 yards for a fourth-quarter touchdown.

What to notice: in Chicago's defense, Urlacher's depth on passing downs: he routinely ends up 15 or more yards deep in the middle of the field. In Indianapolis's, the corners: short, outside, and quick to the flat, with Dwight Freeney and Robert Mathis rushing from the ends, so that the four-man rush could do its part.

2-Man: two deep, man underneath

Keep the two deep safeties, but change what the five underneath defenders do. Instead of dropping to zones, each one takes a receiver, man-to-man. That's **2-Man**, called **Cover 5** in many playbooks (in the old numbering, five underneath players in man plus two deep) and "Cover 2 Man" in video games and on many broadcasts.

¹⁰"Super Bowl XLI," Wikipedia: https://en.wikipedia.org/wiki/Super_Bowl_XLI (February 4, 2007, Dolphin Stadium, Miami Gardens; the first Super Bowl played in rain; Colts 29, Bears 17; MVP Peyton Manning; Dungy and Smith the first African American head coaches to reach a Super Bowl; Smith Dungy's linebackers coach in Tampa 1996–2000; the Colts' regular-season run defense last in the league at 173.0 rushing yards a game; Bob Sanders's forced fumble and interception; Kelvin Hayden's 56-yard interception return for a touchdown in the fourth quarter).

¹¹"Lovie Smith," Wikipedia: https://en.wikipedia.org/wiki/Lovie_Smith (Buccaneers linebackers coach 1996–2000; Rams defensive coordinator 2001–2003; Bears head coach 2004–2012; 2005 Bears allowed the fewest points in the league; 2006 Bears 13–3). Urlacher's 2005 award: see the note on Urlacher.

Figure 8: When NFL defenses call Cover 2 and 2-Man, by down and distance (share of charted regular-season dropbacks). Left, Cover 2 (zone): fairly steady on early downs and third-and-long, least common on third-and-short, where the offense needs only a yard or two and squat corners and deep safeties are the wrong tools. Right, 2-Man: rare on early downs and peaking on third-and-7 or more, where the defense must cover the receivers at the sticks and keep two safeties deep. The charting source changed after 2022 and FTN labels both coverages more often than Next Gen Stats did, so compare the shapes, not the levels.

In both charting eras, 2-Man is called on third-and-7 to 10 far more often than on first down (about 6 percent of charted dropbacks against about 1 in the Next Gen Stats seasons, and about 10 against 5 in the FTN seasons), and it rises again in the last two minutes of a half, when the offense has to move quickly and the defense can't afford a long completion.¹² It remains a specialist's call: a few percent of all dropbacks. Cover 2 itself is a far bigger part of the menu, roughly one dropback in seven in the Next Gen Stats charting (13.9 percent in 2025 by Next Gen Stats' own count), and it is least common on third-and-short, where an offense that needs two yards would love to face a defense with corners in the flats and two safeties 13 yards away.¹³

What 2-Man gives up. Everything man coverage gives up, plus the things two-deep gives up.

- **The quarterback's legs.** Five defenders have their backs turned to the quarterback, chasing receivers, and only four are rushing. If the pocket opens, there is nobody watching the quarterback, and a scramble up the middle can go for 15 yards. 2-Man against a running quarterback is a risk every coordinator weighs.
- **The man-beaters.** Rub routes and crossing routes like mesh make trailing defenders run through traffic, and routes that break *outside* (an out, a corner, a fade) go away from the defenders' inside leverage (Man Coverage has the list).
- **The run.** Two safeties deep and five defenders turned to their men: a draw on third-and-8 is a classic call against it.

Telling Cover 2 from 2-Man. Before the snap they can look identical, and good defenses make sure they do. After the snap, watch the corners and the underneath defenders in the first second. Cover 2 corners jam, then *sit*, facing the quarterback, while the outside receiver runs past. 2-Man corners turn and *run* with the receiver, on his inside hip, with their backs half-turned to the quarterback. If the corner is still with the wide receiver 12 yards downfield, it's 2-Man.

Why classic Tampa 2 faded, and what survived

In 2005 the Buccaneers had the NFL's best total defense and the Bears the second-best.¹⁴ By 2006 a long list of teams (Buffalo, Minnesota, Kansas City, Detroit and others) had imported the system, often by hiring coaches from Dungy's and Kiffin's staffs. A decade later almost none of them played it as a base defense. What happened?

¹²This book's calculation from the same nflverse data as the deep-pass figure (regular-season dropbacks 2018–2025 with a charted coverage). 2-Man share by situation, NGS seasons / FTN seasons: first down 1.1% / 5.2%; third or fourth and 7–10 yards 6.4% / 9.7%; third or fourth and 11+ 5.1% / 8.1%; in the last two minutes of either half 4.4% / 9.2%, against 1.7% / 5.8% at other times. Cover 2: third or fourth and 1–2 yards 8.0% / 13.6%, first down 13.6% / 20.9%. Season shares of Cover 2 in the nflverse labels: 12.7–14.1% in 2018–2022 (NGS), 16.3%, 21.1% and 23.0% in 2023–2025 (FTN).

¹³NFL Next Gen Stats via NFL.com, "The coverage that turned the Seahawks into Super Bowl winners and is taking the NFL by storm": <https://www.nfl.com/news/the-coverage-that-turned-the-seahawks-into-super-bowl-winners-and-is-taking-the-nfl-by-storm> (2025 coverage shares on dropbacks: Cover 4 17.2%, Cover 2 13.9%, Cover 6 9.2%). Next Gen Stats' own 2025 figure is lower than the FTN labels in nflverse (23.0%); the two charters classify coverages differently.

¹⁴Same "Tampa 2" Wikipedia article as the note on Dungy's Steelers quote: in 2005 the Buccaneers ranked first in fewest total yards allowed, the Bears second and the Colts eleventh; by 2006 Buffalo, Minnesota, Kansas City and Detroit, among others, had adopted the system.

The rules leaned against it. The coverage depended on squeezing receivers' releases and on underneath defenders who could disrupt routes as they crossed their zones. After the 2003 AFC Championship Game, in which New England's physical defensive backs (Ty Law above all) took apart Peyton Manning's Colts, the league made downfield contact past 5 yards a point of emphasis for the 2004 season, and illegal-contact fouls jumped from 79 to 191.¹⁵ Physical zone coverage became expensive. (There's an irony in it: the Colts' complaints drove the change, and Dungy was the Colts' head coach.) *Dynasties and Counterpunches* tells the story of that rule and the passing boom that followed.

Offenses learned to live in the seam. A Tampa 2 Mike carrying a tight end up the middle was a fair fight in 1999. Against a 6-foot-6 tight end who ran like a receiver, or a slot receiver lined up as the inside man in a trips formation, it wasn't. Offenses also learned to attack the hole the Mike vacates, with digs and curls that sit down 12 to 15 yards deep in front of him, and to flood the sideline holes the squat corners leave. Peyton Manning, who practised against Dungy's Tampa 2 every day in Indianapolis, became one of the best at taking it apart (that, too, is in *Dynasties and Counterpunches*).

The Mikes were rare. A middle linebacker who can stop the run between the tackles and also run 20 yards with a receiver is one of the rarest athletes in the sport. Teams that copied the scheme without one found out quickly what Cover 2 without a deep middle defender looks like.

Light boxes met better run games. A two-deep, four-rush defense lives with six or seven defenders near the line. That was survivable when offenses lined up in two-back formations and ran into the teeth of it; it was less survivable against spread formations that thinned the box further and against run games designed to exploit it.

Then the league went one-high, and then two-high again, but differently. Through the early 2010s the fashionable answer to everything was Pete Carroll's Seattle Cover 3, a single-high defense with press corners and an eighth defender near the line (The Cover 3 Family). (Gus Bradley, Seattle's defensive coordinator from 2009 to 2012, had coached linebackers under Kiffin in Tampa.) When two-high defense came back after 2018, it came back as **quarters and match coverage**: two safeties who read the receivers in front of them and fit the run, not two safeties guarding halves while the Mike runs the middle (Quarters and the Two-High Match Family).

What survived

A great deal, just not under its old name.

- **Cover 2 itself.** It never left. Next Gen Stats counted 13.9 percent of 2025 dropbacks as Cover 2 (the source is in the note on 2-Man's situations), and the FTN charting in nflverse labels even more; it remains a standard call on long yardage, at the end of halves, and as a change-up for defenses whose base is something else.
- **The Mike who carries the seam.** "The middle defender carries #3 vertical" is now a rule in Cover 3 match and quarters, the descendants of spot-drop zone. Any time you see a linebacker turn and run with a tight end up the middle of the field in a modern zone, that's the Tampa 2 Mike's job inside a newer coverage (Cover 3 match).
- **Two-high pictures that become three-deep.** The Tampa 2's real trick was showing two deep safeties and playing with three deep defenders after the snap. Modern defenses do the same thing by rotating a safety instead of running the Mike, and that is the whole subject of Disguise, Rotation, and Split-Field Coverage.
- **Cover 2 as half a coverage.** Cover 6 plays quarters to one side and Cover 2 to the other, squat corner and all; split-field defenses use the Cover 2 half to the short side of the field or against a formation's lone receiver (Quarters and the Two-High Match Family).
- **2-Man on third down,** as the chart above shows.
- **The people.** The Tampa staffs of 1996–2008 seeded a generation of NFL coaches. Lovie Smith and Rod Marinelli took the system to Chicago and Detroit; Mike Tomlin, Tampa Bay's defensive backs coach from 2001 to 2005, and Raheem Morris, who worked his way up the same secondary, became head coaches.¹⁶ The approach (simple calls, fast players, eyes on the quarterback, rally to the ball) outlived the coverage. Matt Eberflus, a linebackers coach on Marinelli's Dallas staff, carried a Cover 2-heavy defense

¹⁵Phil Perry / NBC Sports Boston, "They called it the 'Ty Law Rule' ... and that was OK with him": <https://www.nbcsportsboston.com/nfl/new-england-patriots/they-called-it-the-ty-law-rule-and-that-was-ok-with-him/393549/> (Polian's complaints after the January 2004 AFC Championship Game; the 2004 emphasis on downfield contact; illegal-contact fouls rising from 79 to 191).

¹⁶Mike Tomlin: Buccaneers defensive backs coach 2001–2005, https://en.wikipedia.org/wiki/Mike_Tomlin ; Raheem Morris: Buccaneers defensive quality control 2002, assistant defensive backs coach 2004–2005 and defensive backs coach 2007 before becoming head coach in 2009, <https://www.buccaneers.com/news/morris-returns-2187780> . Rod Marinelli was Tampa Bay's defensive line coach under Dungy and Gruden and Detroit's head coach from 2006 to 2008: https://en.wikipedia.org/wiki/Rod_Marinelli . Gus Bradley: Buccaneers linebackers coach before becoming Seattle's defensive coordinator in 2009: https://en.wikipedia.org/wiki/Gus_Bradley . Tomlin resigned as Pittsburgh's head coach after the 2025 season; Morris is the 49ers' defensive coordinator in 2026 (course fact sheet, 2026 staffs).

to Indianapolis as coordinator (2018–2021) and Chicago as head coach (2022–2024): by the charting in nflverse, his 2018 Colts played Cover 2 on the second-highest share of dropbacks in the league and his 2023 Bears on the third-highest.¹⁷

💡 Watch for it on Sunday: the squat-corner spotter

On every passing down for one quarter, look at the cornerbacks first.

- **Before the snap.** Corners 5 to 7 yards off, a step *outside* the wide receiver, flat-footed, shoulders turned in toward the ball? Two safeties deep (12 to 14 yards) and wide (outside the hashes)? Think **Cover 2**. Corners on the receiver’s inside shoulder, eyes locked on him? Think **2-Man**. Corners 7 or 8 off and ready to backpedal? Probably not Cover 2.
- **At the snap.** Does the corner punch the receiver and then *stop*, sitting in the flat while the receiver runs past? Cover 2. Does he turn and run with him? 2-Man (or a disguise into something else).
- **One second later.** Find the Mike. Did he stop at 10 yards, eyes on the quarterback? Cover 2. Is he still running straight down the middle at 15? **Tampa 2**.
- **When the ball is thrown.** Where did it go? A sideline throw between the corner and the safety, or a seam between the safeties, is the offense attacking exactly the holes this chapter mapped. A completed 6-yard out on third-and-12, followed by an immediate tackle, is the coverage winning.

Predict the play

💡 Predict the play 1: corners on the doorstep

Figure 9: First-and-10 at midfield, ball in the middle of the field. The cornerbacks and safeties are ringed. Use the depth numbers on the left and the hash marks along the bottom.

What coverage is the defense showing, and if it plays what it shows, what two-receiver combination on one side would you call, and why?

Answer 1 is at the end of the chapter. Try it first.

¹⁷“Matt Eberflus,” Wikipedia: https://en.wikipedia.org/wiki/Matt_Eberflus (Cowboys linebackers coach 2011–2017 under Rod Marinelli’s defense; Colts defensive coordinator 2018–2021; Bears head coach 2022 to November 2024; Cowboys defensive coordinator 2025). Ranks are this book’s calculation from nflverse participation labels, Cover 2 share of each defense’s charted regular-season dropbacks: Indianapolis 31.8% in 2018 (2nd) and 24.1% in 2019 (4th); Chicago 26.1% in 2022 (4th) and 23.3% in 2023 (3rd). Ranks are within a season, so they are not affected by the 2022/2023 change of charting source.

💡 Predict the play 2: the tight end up the middle

Figure 10: Second-and-7. Trips to the offense's right: Z (#1), H (#2) and the tight end Y (#3), in-line. The defense shows a two-high shell with squat corners. On this play Y will run straight up the middle of the field. The Mike (M) and Y are ringed.

If this is plain Cover 2, who covers Y, and what happens? If it's Tampa 2? And which version would the offense rather face with this formation?

Answer 2 is at the end of the chapter. Try it first.

💡 Predict the play 3: third-and-8, two-high, corners tight

Figure 11: Third-and-8. Two safeties deep. The corners are pressed, on the receivers' inside shoulders; the nickel (\$) is tight on H and the Will (W) is over the tight end Y. The ringed defenders are looking at the receivers, not at the quarterback. The quarterback is a good runner.

What coverage is most likely, and name two ways the offense can beat it that would not work as well against Cover 2.

Answer 3 is at the end of the chapter. Try it first.

Takeaways

- **Cover 2 is two deep and five under.** The safeties each guard a deep half; the corners guard the flats; three linebackers (or two and a nickel) guard the curl-hook zones and the hole. It takes away the short throws and everything over the top, and it costs a defender in the box.
- **The hard (squat) corner is the tell.** Five to seven yards off, outside leverage, eyes inside; at the snap he jams, sinks and sits in the flat. When you see two of them with two deep safeties, think Cover 2 (and check for 2-Man after the snap).
- **Cover 2's thin spots are known by heart:** the hole shot along the sideline, the smash corner over the squat corner, the deep middle between the safeties, and the intermediate sideline hole. Deep passes go to the middle against Cover 2 more often than against any other coverage in the charting data.
- **Tampa 2 sends the Mike down the middle,** turning two-deep into three-deep after the snap. It closes the deep middle, needs a rare linebacker, opens the intermediate middle, and was the identity of Dungy and Kiffin's Buccaneers, Dungy's Colts and Lovie Smith's Bears.
- **2-Man keeps the two deep safeties and plays man underneath,** in trail technique with inside leverage. It's a long-yardage and end-of-half call, vulnerable to scrambles, rubs and out-breaking routes.
- **Classic Tampa 2 faded** (contact rules, seam-stretching offenses, rare Mikes, light boxes, the move to Cover 3 and then to quarters), **but its pieces survive:** Cover 2 as a call, the seam-carrying middle defender, two-high pictures that become three-deep, and a large coaching tree.

Connections

Builds on: Coverage Fundamentals (zones, the shell read, press and off), Man Coverage (trail technique and inside help, for 2-Man), The Cover 3 Family (the three-deep alternative, and the cloud rotation that borrows the squat corner for one side), and Dropback Concepts (smash, flood and four verticals, the concepts built to beat this coverage).

Sets up: Quarters and the Two-High Match Family, the two-high coverage that replaced spot-drop Cover 2 as the NFL's two-deep base, and Cover 6, which is half Cover 2; Disguise, Rotation, and Split-Field Coverage, where Cover 2 is reached by rotating from a one-high picture; Zone Blitzes, Fire Zones, and Simulated Pressure; What Beats What, which recaps smash versus Cover 2 in its concept-by-coverage matrix; Third Down and Clock and Game Management, where 2-Man lives; and the history in From the Single Wing to the 1970s Scoring Drought (Carson's Steelers) and Dynasties and Counterpunches (the Tampa 2 dynasty and how Manning and the seam-running tight ends beat it). The Coverage and Pressure Atlas has one-page cards for Cover 2, Tampa 2 and 2-Man, and a dialect table (Cover 5, Cover 2 Man, 2-Man).

If you want to go deeper: Tony Dungy's memoir *Quiet Strength* (2007) for the coach and his Steelers education; Chris B. Brown's *The Art of Smart Football* and his Smart Football essays on Cover 2 and Tampa 2; Cody Alexander's MatchQuarters newsletter and his book *Match Quarters* for how two-high coverage evolved after Cover 2; and NFL Films' footage of the 1976 Steelers and the 2002 Buccaneers, where you can watch the Mike run down the middle long before broadcasts showed you the All-22.

Answers to Predict the play

Answer 1.

It shows Cover 2. The tells: both corners are 5 yards off, a step *outside* their receivers (outside leverage), not pressed and not 8 yards deep; both safeties are 13.5 yards deep and 10 yards from the middle, between the hash and the numbers, where a deep-half player stands. That combination says the corners have the flats and the safeties have halves.

The call: smash, or a fade with a seam inside it. Both attack the strip along the sideline between a squatting corner and a deep-half safety. Smash (outside hitch, inside corner route) puts the corner in a high-low bind; the quarterback reads only him. A go route by the outside receiver with a seam by the slot puts the *safety* in a two-on-one: he can't be over both. Either one works to the side the quarterback prefers; many offenses run the same concept to both sides and pick after the snap.

The catch: confirm it after the snap. If the corners turn and run with the receivers, it's 2-Man (and the corner route runs into a trailing defender with a safety on top). If one safety races to the middle, it was a disguise (Disguise, Rotation, and Split-Field Coverage). If the Mike runs down the middle, the seam is gone but the sideline holes are still there.

Answer 2.

In plain Cover 2, almost nobody. The Mike drops to the hole at 10 to 12 yards and watches Y run past him. The safety on the trips side has three receivers in his half, and the outside two are running routes he can't ignore; the far safety is guarding the left

half and X. Y ends up in the deep middle, between the two safeties, which is hole ③. This is the classic way to attack Cover 2 from trips: put the third receiver up the middle.

In Tampa 2, the Mike turns and runs with Y. That's exactly the throw the coverage was built to take away: the Mike carries the seam and the safeties stay wide. The offense's question then becomes *who* is running up the middle. A big, slow tight end against a fast linebacker is a fair fight. A fast tight end, or a slot receiver moved into the #3 spot, against a linebacker 15 yards downfield is a mismatch, which is how offenses beat Tampa 2 in its later years.

The offense would rather face plain Cover 2, but even against Tampa 2 it has an answer: Y's seam pulls the Mike deep, so a dig or curl by H settling down at 12 to 14 yards in the space the Mike just left is open underneath him. Either way the formation has done its job: it has put the middle defender on a receiver, alone.

Answer 3.

Most likely 2-Man. Two deep safeties plus man-coverage technique underneath: pressed corners, eyes on the receivers, *inside* leverage (the defenders are taking away the inside because the safeties are over the top). It's also the situation for it: third-and-7 to 10 is where NFL defenses call 2-Man most often.

Two ways to beat it:

- **The quarterback's legs.** Five defenders will turn and run with receivers, backs to the ball, and only four will rush. If a lane opens, a scramble up the middle can easily cover 8 yards. Against Cover 2, the underneath zone defenders are facing the quarterback and would come up to tackle him.
- **Man-beaters that break away from the leverage.** A rub (one receiver's route crossing in front of a teammate's defender), mesh, or out-breaking routes such as an out or a corner, all of which go away from the defenders' inside shoulders. A 9-yard out against a corner who is trailing on the inside is open; against a Cover 2 corner sitting in the flat, the same route runs into him.

Throwing deep is the one thing *not* to do: two safeties are waiting there with nothing else to cover.
